Renewable services the easy way

The Microgeneration Certification Scheme (MCS) is an independent scheme that certifies microgeneration products and installers in accordance with consistent standards. It is designed to evaluate microgeneration products and installers against robust criteria providing greater protection for consumers.

Easy MCS Ltd was established to provide a complete portfolio of renewable services to assist installers and providers in meeting the growing demand for renewable technologies.

MCS Installer Accreditation **www.MCSaccredited.com**

At Easy MCS Ltd we are committed to providing you with a simple solution to becoming accredited under the Microgeneration Certification Scheme.

The MCS scheme (Low Carbon Buildings Programme) is the only certification scheme to cover all microgeneration products and services, and has support from the Department of Energy and Climate Change, industry and non-governmental groups as a prime method for making a substantial contribution to cutting the UK's dependency on fossil fuels and carbon dioxide emissions.

The MCS Scheme is designed to evaluate microgeneration products and installers against robust criteria providing greater protection for consumers. It is an internationally recognised quality assurance scheme and mark for LZCT installers and products. It was designed with input from installer and product representatives. Similar to the Gas Safe Register. The MCS Scheme also gives you a mark of competency and demonstrates to your customers that you can install to the highest quality every time.

Our dedicated team of consultants will guide you through the process in a swift and pain free manner which will allow you to offer Government Grant Funding, Feed in Tariffs and the Renewable Heat Incentive (RHI) for MCS accredited technologies including; Air Source Heat Pumps, Ground Source Heat Pumps, Solar Thermal, Solar PV, Biomass & Small Scale Hydro. At MCS Accredited we offer complete accreditation packages covering all MCS technologies to companies and installers from 1-10,000 employees.

We provide a complete package to ensure your company meets the requirements of the MCS scheme including all internal and external procedures from application to inspection.

We offer a complete mentoring and training service where one of our experienced QMS consultants can visit your premises and guide you through the MCS Accreditation process. We have extensive experience and work closely with UK MCS Certification bodies and Easy MCS Ltd boasts a 100% document pass rate.

The MCS Directory www.MCSdirectory.co.uk

At Easy MCS Ltd we also offer the UK's First and Only MCS Accredited Installer Directory. This directory is available to new and existing MCS Accredited Installers of all Renewable Technologies and is included within our Accreditation packages as an option.

The value of being listed on the MCS Installer Directory is without question. Hundreds of people each week are looking for an installer in their area who they can use in conjunction with government grants, the renewable heat incentive (RHI) or Feed In Tariffs.

Our extensive directory lists all your details, including address, phone number and a link to your website. Also your areas of speciality so you will receive enquiries from potential customers interested in the area you have listed.

One enquiry leading to One sale will cover all your listing costs for the next five years!
How can you not risk being listed?

MCS accreditation explained

The MCS is the only certification scheme to cover all microgeneration products and services, and has support from the Department of Energy and Climate Change, industry and non-governmental groups as a prime method for making a substantial contribution to cutting the UK's dependency on fossil fuels and carbon dioxide emissions.

The MCS is a scheme that certifies low carbon and renewable energy technology products and installers, the ambition is to rapidly grow the microgeneration industry by applying rigorous standards to the manufacture and installation of approved technologies. The MCS therefore provides consumers with a guarantee that the products/ installers they select meet a high, third party tested, standard. To be eligible to receive a grant or renewable incentive.

Why Does it Matter?

The MCS demonstrates your competence to carry out an installation to your customers. In this rapidly growing industry, installers and products that carry the MCS Mark are likely to be seen as the preferred option in the market place. This is because MCS is linked to many of the key factors driving demand, such as:

- Feed-In Tariffs, which will provide guaranteed payments to individuals, business and communities for small-scale electricity generation. For technologies where there is an MCS standard, both the technology and the installer must be MCS certificated to be eligible;
- The Renewable Heat Incentive is planned for 2011 and will provide cash back to individuals, business and communities for renewable heat generation. The Government has indicated that the Renewable Heat Incentive is being linked to MCS products and installers;
- The Low Carbon Buildings Programme and Energy Saving Scotland home renewables grant schemes (heat technologies only) require MCS certificated products and installers to be used;
- The Code for Sustainable Homes, which is a mandatory requirement for all newly built homes to meet sustainability ratings, including ratings for energy and CO2 emissions. MCS certificated technologies can be used to meet the requirements of this Code;
- Planning permission for consumers for certain renewable energy technologies has now been made a lot simpler thanks to permitted development rights introduced in England and Scotland; and
- The Standard Assessment Procedure (SAP) for Energy Rating of Dwellings recognises MCS certificated products when determining whether products are eligible for inclusion in SAP assessments.

Demand in the renewable market is set to explode in 2011. The team at Easy MCS Ltd are here to assist you in each step of the accreditation process. Get in touch to discuss your company's bespoke requirements.
